1 Introduction and functional overview

This document defines primitive CppImplementationDataTypes that can be used in ServiceInterface descriptions provided in ARXML as defined in TPS_ManifestSpecification [1].

The definition of common used CppImplementationDataTypes increases the portability of applications and prevents from re-defining the same types for each application.

2 Acronyms and Abbreviations

The glossary below includes acronyms and abbreviations used in this document that are not included in the [2, AUTOSAR glossary].

Terms:	Description:			
2's complement	method of signed number representation.

3.2 Related specification

The TPS Manifest specification [1] defines the meta-model that is used for the description of primitive datatypes that are presented in this document.

The specification SWS CommunicationManagement [3] defines the language binding rules for model artifacts.

4 Constraints and assumptions

4.1 Limitations

No limitations known.

4.2 Applicability to car domains

No restrictions to applicability.

5 Dependencies to other Functional Clusters

This document is dependent on the language binding rules defined in SWS CommunicationManagement [3].

6 Requirements Tracing

Requirements against this document are exclusively stated in the corresponding requirements document [4].

The following table references the requirements specified in the corresponding requirements document and provides information about individual specification items that fulfill a given requirement.

Requirement	Description	Satisfied by
[RS_AP_00111]	The AUTOSAR Adaptive Platform shall support source code portability for AUTOSAR Adaptive applications.	[SWS_APT_00001] [SWS_APT_00004] [SWS_APT_00007] [SWS_APT_00010] [SWS_APT_00022] [SWS_APT_00025] [SWS_APT_00028] [SWS_APT_00031] [SWS_APT_00043] [SWS_APT_00046] [SWS_APT_00049]

7 Functional specification

7.1 Primitive ImplementationDataTypes and their mapping to C++ datatypes

This chapter describes diverse primitive StdCppImplementationDataTypes that are predefined by AUTOSAR for the usage in the Adaptive Platform and defines their mapping to C++ datatypes.

The mapping of a primitive StdCppImplementationDataType that is used in a ServiceInterface to a C++ datatype is defined in SWS_CommunicationManagement [3].

Please note that [RS_AP_00114] in [4] defines that interfaces of AUTOSAR Adaptive platform are designed to be compatible with C++14 [5] but at the same time it is allowed to use newer C++ versions like C++17. In addition the Adaptive Core document [6] defines common classes and functionality that is used by multiple AUTOSAR functional clusters as part of their public interfaces.

7.1.1 Bool

[SWS_APT_00049] primitive Implementation Data Type bool [The primitive Implementation Data Type bool is defined by the StdCppImplementationDataType with the category VALUE and the shortName bool. | (RS_AP_00111)

```
<STD-CPP-IMPLEMENTATION-DATA-TYPE>
     <SHORT-NAME>bool</SHORT-NAME>
     <CATEGORY>VALUE</CATEGORY>
     <TYPE-EMITTER>FUNDAMENTAL_TYPE</TYPE-EMITTER>
</STD-CPP-IMPLEMENTATION-DATA-TYPE>
```

Listing 7.1: Boolean ImplementationDataType

The bool StdCppImplementationDataType will be mapped to the bool-type in C++, that is capable of holding one of the two values: true or false. Please note that in C++ sizeof(bool) is implementation-defined.

Please note that according to [TPS_MANI_01177] if the typeEmitter is set to any value other than TYPE_EMITTER_ARA, the ARA generator shall not generate the corresponding data type definition.

7.1.2 Signed Integer

7.1.2.1 int8 t

[SWS_APT_00001] primitive Implementation Data Type int8_t [The signed integer type of 8 bits is defined by the StdCppImplementationDataType with the category VALUE and the shortName int8_t.|(RS AP 00111)

```
<STD-CPP-IMPLEMENTATION-DATA-TYPE>
     <SHORT-NAME>int8_t</SHORT-NAME>
     <CATEGORY>VALUE</CATEGORY>
     <HEADER-FILE>cstdint</HEADER-FILE>
</STD-CPP-IMPLEMENTATION-DATA-TYPE>
```

Listing 7.2: int8_t StdCppImplementationDataType

The *int8_t* StdCppImplementationDataType will be mapped to int8_t of the C++ standard library with width of exactly 8 bit.

7.1.2.2 int16_t

[SWS_APT_00004] primitive Implementation Data Type <code>int16_t</code> [The signed integer type of 16 bits is defined by the <code>StdCppImplementationDataType</code> with the <code>category VALUE</code> and the <code>shortName int16_t.</code> | (RS_AP_00111)

```
<STD-CPP-IMPLEMENTATION-DATA-TYPE>
     <SHORT-NAME>int16_t</SHORT-NAME>
     <CATEGORY>VALUE</CATEGORY>
     <HEADER-FILE>cstdint</HEADER-FILE>
</STD-CPP-IMPLEMENTATION-DATA-TYPE>
```

Listing 7.3: int16 t StdCppImplementationDataType

The *int16_t* StdCppImplementationDataType will be mapped to int16_t of the C++ standard library with width of exactly 16 bit.

7.1.2.3 int32 t

[SWS_APT_00007] primitive Implementation Data Type int32_t | The signed integer type of 32 bits is defined by the StdCppImplementationDataType with the category VALUE and the shortName int32_t.](RS_AP_00111)

```
<STD-CPP-IMPLEMENTATION-DATA-TYPE>
    <SHORT-NAME>int32_t</SHORT-NAME>
    <CATEGORY>VALUE</CATEGORY>
    <HEADER-FILE>cstdint</HEADER-FILE>
</STD-CPP-IMPLEMENTATION-DATA-TYPE>
```

Listing 7.4: int32_t StdCppImplementationDataType

The *int32_t* StdCppImplementationDataType will be mapped to int32_t of the C++ standard library with width of exactly 32 bit.

7.1.2.4 int64 t

[SWS_APT_00010] primitive Implementation Data Type int64_t [The signed integer type of 64 bits is defined by the StdCppImplementationDataType with the category VALUE and the shortName int64_t.|(RS_AP_00111)

```
<STD-CPP-IMPLEMENTATION-DATA-TYPE>
  <SHORT-NAME>int64_t</short-NAME>
  <CATEGORY>VALUE</CATEGORY>
  <HEADER-FILE>cstdint</HEADER-FILE>
</STD-CPP-IMPLEMENTATION-DATA-TYPE>
```

Listing 7.5: int64 t StdCppImplementationDataType

The *int64_t* StdCppImplementationDataType will be mapped to int64_t of the C++ standard library with width of exactly 64 bit.

7.1.3 Unsigned Integer

7.1.3.1 uint8 t

[SWS_APT_00022] primitive Implementation Data Type $uint8_t$ [The unsigned integer type of 8 bits is defined by the StdCppImplementationDataType with the category VALUE and the shortName uint8_t.] (RS_AP_00111)

```
<STD-CPP-IMPLEMENTATION-DATA-TYPE>
     <SHORT-NAME>uint8_t</SHORT-NAME>
     <CATEGORY>VALUE</CATEGORY>
     <HEADER-FILE>cstdint</HEADER-FILE>
</STD-CPP-IMPLEMENTATION-DATA-TYPE>
```

Listing 7.6: uint8_t StdCppImplementationDataType

The *uint8_t* StdCppImplementationDataType will be mapped to uint8_t of the C++ standard library with width of exactly 8 bit.

7.1.3.2 uint16 t

[SWS_APT_00025] primitive Implementation Data Type *uint16_t* | The unsigned integer type of 16 bits is defined by the StdCppImplementationDataType with the category VALUE and the shortName uint16_t.|(RS_AP_00111)

```
<STD-CPP-IMPLEMENTATION-DATA-TYPE>
  <SHORT-NAME>uint16_t</SHORT-NAME>
  <CATEGORY>VALUE</CATEGORY>
  <HEADER-FILE>cstdint</HEADER-FILE>
</STD-CPP-IMPLEMENTATION-DATA-TYPE>
```

Listing 7.7: uint16_t StdCppImplementationDataType

The *uint16_t* StdCppImplementationDataType will be mapped to uint16_t of the C++ standard library with width of exactly 16 bit.

7.1.3.3 uint32 t

[SWS_APT_00028] primitive Implementation Data Type *uint32_t* [The unsigned integer type of 32 bits is defined by the StdCppImplementationDataType with the category VALUE and the shortName uint32_t.] (RS_AP_00111)

```
<STD-CPP-IMPLEMENTATION-DATA-TYPE>
     <SHORT-NAME>uint32_t</SHORT-NAME>
     <CATEGORY>VALUE</CATEGORY>
     <HEADER-FILE>cstdint</HEADER-FILE>
</STD-CPP-IMPLEMENTATION-DATA-TYPE>
```

Listing 7.8: uint32 t StdCppImplementationDataType

The *uint32_t* StdCppImplementationDataType will be mapped to uint32_t of the C++ standard library with width of exactly 32 bit.

7.1.3.4 uint64 t

[SWS_APT_00031] primitive Implementation Data Type uint64_t [The unsigned integer type of 64 bits is defined by the StdCppImplementationDataType with the category VALUE and the shortName uint64_t.|(RS_AP_00111)

```
<STD-CPP-IMPLEMENTATION-DATA-TYPE>
  <SHORT-NAME>uint64_t</SHORT-NAME>
  <CATEGORY>VALUE</CATEGORY>
  <HEADER-FILE>cstdint</HEADER-FILE>
</STD-CPP-IMPLEMENTATION-DATA-TYPE>
```

Listing 7.9: uint64_t StdCppImplementationDataType

The *uint64_t* StdCppImplementationDataType will be mapped to uint64_t of the C++ standard library with width of exactly 64 bit.

7.1.4 Floating point types

7.1.4.1 float

[SWS_APT_00043] primitive Implementation Data Type *float* [The single precision floating point type is defined by the StdCppImplementationDataType with the category VALUE and the shortName float. | (RS AP 00111)

```
<STD-CPP-IMPLEMENTATION-DATA-TYPE>
    <SHORT-NAME>float</SHORT-NAME>
    <CATEGORY>VALUE</CATEGORY>
    <TYPE-EMITTER>FUNDAMENTAL_TYPE</TYPE-EMITTER>
</STD-CPP-IMPLEMENTATION-DATA-TYPE>
```

Listing 7.10: float StdCppImplementationDataType

The *float* StdCppImplementationDataType will be mapped in C++ to float that is the 32 bit floating point type.

Please note that according to [TPS_MANI_01177] if the typeEmitter is set to any value other than TYPE_EMITTER_ARA, the ARA generator shall not generate the corresponding data type definition.

7.1.4.2 double

[SWS_APT_00046] primitive Implementation Data Type double | The double precision floating point type is defined by the StdCppImplementationDataType with the category VALUE and the shortName double. | (RS AP 00111)

```
<STD-CPP-IMPLEMENTATION-DATA-TYPE>
     <SHORT-NAME>double
<CATEGORY>VALUE</CATEGORY>
     <TYPE-EMITTER>FUNDAMENTAL_TYPE</TYPE-EMITTER>
</STD-CPP-IMPLEMENTATION-DATA-TYPE>
```

Listing 7.11: double StdCppImplementationDataType

The *double* StdCppImplementationDataType will be mapped in C++ to double that is the 64 bit floating point type.

Please note that according to [TPS_MANI_01177] if the typeEmitter is set to any value other than TYPE_EMITTER_ARA, the ARA generator shall not generate the corresponding data type definition.

A Mentioned Manifest Elements

For the sake of completeness, this chapter contains a set of class tables representing meta-classes mentioned in the context of this document but which are not contained directly in the scope of describing specific meta-model semantics.

Class	CppImplementationDataType (abstract)					
Package	M2::AUTOSARTemplates::AdaptivePlatform::ApplicationDesign::CppImplementationDataType					
Note	This meta-class represents the way to specify a reusable data type definition taken as a the basis for a C++ language binding					
	Tags:atp.Status=draft					
Base	ARElement, ARObject, AbstractImplementationDataType, AtpBlueprint, AtpBlueprintable, AtpClassifier, AtpType, AutosarDataType, CollectableElement, CppImplementationDataTypeContextTarget, Identifiable, MultilanguageReferrable, PackageableElement, Referrable					
Subclasses	CustomCppImplementation	nDataTyp	e, StdCpp	olmplementationDataType		
Aggregated by	ARPackage.element					
Attribute	Туре	Mult.	Kind	Note		
arraySize	PositiveInteger	01	attr	This attribute can be used to specify the array size if the enclosing CppImplementationDataType has array semantics.		
				Stereotypes: atpVariation Tags: atp.Status=draft vh.latestBindingTime=preCompileTime		
headerFile	String	01	attr	Configuration of the Header File with the custom class declaration.		
				Tags:atp.Status=draft		
namespace (ordered)	SymbolProps	*	aggr	This aggregation allows for the definition an own namespace for the enclosing CppImplementationData Type.		
				Tags:atp.Status=draft		
subElement (ordered)	CppImplementation DataTypeElement	*	aggr	This represents the collection of sub-elements of the enclosing CppImplementationDataType		
				Tags:atp.Status=draft		
template Argument	CppTemplateArgument	*	aggr	This aggregation allows for the specification of properties of template arguments		
(ordered)				Tags:atp.Status=draft		
typeEmitter	NameToken	01	attr	This attribute can be taken to control how the respective CppImplementationDataType is contributed to the language binding.		
				Tags:atp.Status=draft		
typeReference	CppImplementation DataType	01	ref	This reference shall be defined to define a type reference (a.k.a. typedef).		
				Tags:atp.Status=draft		

Table A.1: CppImplementationDataType

Class	Identifiable (abstract)							
Package	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::Identifiable							
Note	Instances of this class can be referred to by their identifier (within the namespace borders). In addition to this, Identifiables are objects which contribute significantly to the overall structure of an AUTOSAR description. In particular, Identifiables might contain Identifiables.							
Base	ARObject, MultilanguageReferra	ARObject, MultilanguageReferrable, Referrable

In addition to his, Identifiables are objects which contribute significantly to the overall structure of an AUTOSAR lescription. In particular, Identifiables might contain Identifiables. APObject, MultilanguageReferrable, Referrable IRPackage, AbstractDolpLogicAddressProps, AbstractEvent, AbstractServiceInstance, Abstract States AbstractSourityEventFilter. AbstractServiceInstance, Abstract SignalBasedTolSignalTriggeringMapping, AdaptiveSwcInternalBehavior, ApApplicationEndpoint, pplicationEndpoint, ApplicationEndpoint, ApplicationEndpointEndpo						
Attribute	Type Mult	Kind	Note					
adminData	AdminData 01	aggr	object.					
			Tags: atp.Splitkey=adminData xml.sequenceOffset=-40					

 \triangle

Identifiable (abstract)			
Annotation	*	aggr	Possibility to provide additional notes while defining a model element (e.g. the ECU Configuration Parameter Values). These are not intended as documentation but are mere design notes.
			Tags:xml.sequenceOffset=-25
CategoryString	01	attr	The category is a keyword that specializes the semantics of the Identifiable. It affects the expected existence of attributes and the applicability of constraints.
			Tags:xml.sequenceOffset=-50
MultiLanguageOverview Paragraph	01	aggr	This represents a general but brief (one paragraph) description what the object in question is about. It is only one paragraph! Desc is intended to be collected into overview tables. This property helps a human reader to identify the object in question.
			More elaborate documentation, (in particular how the object is built or used) should go to "introduction".
			Tags:xml.sequenceOffset=-60
DocumentationBlock	01	aggr	This represents more information about how the object in question is built or is used. Therefore it is a DocumentationBlock.
			Tags:xml.sequenceOffset=-30
String	01	attr	The purpose of this attribute is to provide a globally unique identifier for an instance of a meta-class. The values of this attribute should be globally unique strings prefixed by the type of identifier. For example, to include a DCE UUID as defined by The Open Group, the UUID would be preceded by "DCE:". The values of this attribute may be used to support merging of different AUTOSAR models. The form of the UUID (Universally Unique Identifier) is taken from a standard defined by the Open Group (was Open Software Foundation). This standard is widely used, including by Microsoft for COM (GUIDs) and by many companies for DCE, which is based on CORBA. The method for generating these 128-bit IDs is published in the standard and the effectiveness and uniqueness of the IDs is not in practice disputed. If the id namespace is omitted, DCE is assumed. An example is "DCE:2fac1234-31f8-11b4-a222-08002b34c003". The uuid attribute has no semantic meaning for an AUTOSAR model and there is no requirement for AUTOSAR tools to manage the timestamp.
